Business Systems Analyst | Agile Delivery | Payments | AWS Certified Cloud Practitioner

Business Systems Analyst with 2+ years of experience delivering enterprise payment platforms across NEFT, RTGS, IFT, and NACH ecosystems. Experienced in business analysis, technical delivery, platform modernization, and cross-functional program execution across cloud and on-premise environments. Proven track record of delivering customer-centric enhancements, driving operational efficiency, and modernizing enterprise platforms while partnering with business and technology teams to deliver measurable business outcomes.

CORE SKILLS

Business Analysis: Requirements Gathering • Business Process Analysis • User Stories • BRDs • Functional Specifications • UAT/SIT • Root Cause Analysis • API Analysis

Project & Delivery Management: Process Improvement • Agile (Scrum) • Sprint Planning • Backlog Grooming • Release Management • Cross-functional Leadership • Stakeholder & Vendor Management • Production Readiness • Incident & Risk Management

Payments & Banking: NEFT • RTGS • IFT • NACH • Core Banking • Settlement Systems • Transaction Processing • RBI Compliance

Technology: AWS Cloud • Spring Boot • EKS • Angular • Java • IBM HTTP Server (IHS) • IBM WebSphere Application Server (WAS) • Apache Tomcat • CI/CD • Deployment Management

Tools: PostgreSQL • Dynatrace • Linux/Unix • Jira • Confluence • Power BI • Excel • Hopex • ChatGPT • Microsoft Copilot • Gemini • SQL Developer • Postman

PROFESSIONAL EXPERIENCE

Deputy Manager IT | Business Systems Analyst - Axis Bank

Jun 2024 - Present

Key initiatives: ABBPS (Axis Bulk Branch Payment System), Business Continuity Planning (BCP) Settlement Application, NACH

- Led end-to-end Product delivery of enterprise payment platform capable of processing volumes of tens of millions of transactions daily enhancements across ABBPS, translating business requirements into scalable solutions while partnering with business, engineering, QA, infrastructure, middleware, cloud, security, and vendor teams from ideation through production deployment.
- Delivered customer-centric platform enhancements, including Customer Friendly File Format (CFF), reporting modernization, and workflow improvements, contributing to **10x** platform growth while improving scalability and customer adoption.
- Delivered 50+ production releases including 10+ major enhancements across Payments applications with minimal downtime.
- Owned functional delivery of the Business Continuity Planning (BCP) Settlement solution and BCP Switching Module, coordinating infrastructure provisioning, deployment planning, SIT, UAT, production readiness, and the Settlement Switching module to strengthen business continuity and operational resilience.
- Led application modernization by coordinating Java 8→21, Angular 17→19, and CI/CD implementation across architecture, middleware, infrastructure, QA, and engineering teams, improving deployment standardization and long-term platform maintainability.
- Partnered with development teams on deployment architecture across Spring Boot, Angular, IBM HTTP Server (IHS), IBM WebSphere Application Server (WAS), Apache Tomcat, AWS, and CI/CD pipelines to ensure seamless implementation across cloud and on-premise environments.
- Improved operational efficiency by delivering 5 reporting dashboards/MIS enhancements and redesigning operational workflows, reducing manual reporting effort by 50% and saving 3–4 hours of effort daily.
- Led cross-functional triage sessions to resolve critical implementation and production issues, including NPCI onboarding dependencies, payment performance bottlenecks, and application degradation by coordinating development, database, infrastructure, and security teams.
- Coordinated the Automation Testing initiative across business, QA, CBS, and engineering teams, reducing manual testing effort by 20% and improving release sign-off timelines by 10%. Reduced corporate onboarding timelines by streamlining SFTP integrations, infrastructure provisioning, network whitelisting, and approvals, significantly accelerating implementation turnaround.
- Designed Jira workflows, dashboards, deployment communication templates, and Confluence documentation that improved delivery governance, project visibility, and stakeholder communication.
- Performed SQL analysis, REST API validation, and production data investigation to resolve critical integration and performance issues, leading cross-functional triage across development, infrastructure, database, and security teams with zero production downtime.
- Strengthened application governance by driving remediation of security and compliance observations, maintaining 24 months of zero overdue audit findings while ensuring platform stability and compliance with RBI, Infosec and AppSec standards.
- Managed vendor deliverables, purchase orders, access provisioning, and cross-team dependencies to ensure timely project execution.

EDUCATION

B.E. Computer Engineering Dr D Y Patil Institute of Technology, Pimpri, Pune | 9.29 CGPA

Jun 2020 - May 2024

- Martian Intern – Persistent Systems: Completed a 7-week software engineering program with hands-on exposure to enterprise software development practices.
- Held progressive leadership positions (Secretary, Vice President, and Data Manager) within the Computer Society of India, organizing technical events, leading cross-functional student teams, and managing operational activities.
